Soundcoat’s family of versatile noise barrier products are specifically designed to block sound transmission through enclosures.

### SOUNDMat PB
- Highly filled, lead-free PVC septum layer
- Can be combined with one or more layers of sound absorber, film facings, decoupling foam layer
- Blocks airborne noise paths while providing thermal insulating value
- Provides additional noise attenuation by reducing low frequency noise
- Ideal for medical equipment, pleasure boats, truck/bus, off-highway vehicles

### SOUNDMat FV and FVP
**SOUNDMat FV:**
- Limp mass barrier bonded to 1/4" layer of high efficiency acoustic foam
- Ideally suited as sound barrier for vehicular cabs and related applications
- Reduces noise transmission into the cab through the floors and walls
- Available with attractive, scuff resistant “finished” vinyl surface

**SOUNDMat FVP:**
- Flexible, open cell polyurethane foam between black vinyl and closed cell foam
- Provides high performance noise control and attractive appearance
- Ideal for marine vessels, off-highway vehicles, heavy duty trucks/tractors; hard surfaces (concrete)

### SOUNDMat LF and LFM
**SOUNDMat LF:**
- Lead septum sound barrier sandwiched between layers of 1/4” polyurethane foam and custom thickness embossed polyurethane foam
- Various septum combinations available (in number and weight)
- Ideal for luxury boats, office equipment, and off-highway vehicles

**SOUNDMat LFM:**
- Combines absorption and barrier to reduce noise penetration
- Lead between Soundfoam M with matte film finish and 1/4” foam decoupler
- Foam decouples the vibrating structure from acoustical lead septum
- Excellent hydrolytic stability
- Ideal as a lining and enclosure for engine rooms, generators, compressor housings

### SOUNDMat-ACoustic Floor Coverings
- Reduces difficult low frequency noise; increases driver/passenger comfort
- Improves thermal insulating performance of interior cabins
- Decorative barrier composite; consists of either carpet or wear resistant mat as top layer
- Available with open cell or closed cell foam decoupling layer
- Fabricated to custom dimensional requirements
- WearMAX is formulated to meet OSHA slip resistance requirements whether dry or wet

### SOUNDfab
- Filled PVC barrier with inorganic filler and scrim
- Weight with minimum thickness; tough, flexible material
- Excellent water, petroleum and chemical resistance for industrial applications
- Ideal for gear boxes or power transmission units

### SOUNDcover/SOUNDForm MB
**SOUNDcover:**
- Molded polyurethane noise barrier
- High temperature resistance, high Sound Transmission Loss
- Injection molded polymer
- Custom molded into complex shapes
- Ideal for diesel engines, Class 3-8 trucks, HVAC, off-highway vehicles, appliances

**SOUNDForm MB:**
- Blocks low frequency noise in transportation/industrial applications
- Available with various foam or fiber decouplers, decorative facings
- Typical cab applications: firewalls, engine covers, cowls, dash, etc.

Materials available in various densities, combinations, and finished facings as well as with pressure sensitive adhesive.
The information contained herein is based on laboratory test data developed by or for Soundcoat and is believed to be reliable, but its accuracy or completeness is not guaranteed. The buyer must test this product to determine its suitability for the specific application before use. ONLY use a Soundcoat product after thoroughly consulting instructions on the data sheet for the specific product.

SOUNDCOAT DISCLAIMS ANY RESPONSIBILITY FOR 1) WARRANTIES OF FITNESS AND PURPOSE, 2) VERBAL RECOMMENDATIONS, 3) CONSEQUENTIAL DAMAGES FROM USE AND 4) VIOLATION OF ANY PATENTS OR TRADEMARKS HELD BY OTHERS.

Contact Soundcoat sales engineering for assistance on prototype parts.

Available decouplers: open or closed cell foams.

Properties subject to change without notice. Check with Soundcoat for latest revisions. Flame, smoke, toxicity performance is not intended to reflect hazards presented by this material under actual fire conditions. The Federal Trade Commission considers that there are no existing test methods or standards regarding flammability that are accurate indicators of the performance of cellular plastic materials under actual fire conditions. Any results of existing test methods are intended for measurements of the relative performance of such materials under specific controlled test conditions.
